

HO-287
Cattail Farm
Glenwood
Private

Circa 1853

The Cattail Farm faces east on the west side of Route 97, set back from the road on a gentle rise of ground. It is a five bay wide, two bay deep, two and a half story high, gabled roof (running north-south) frame (covered by clapboard) house, resting on a stone foundation, with twin, wide brick chimneys inset into its north and south walls and a two bay wide, two bay deep, two story high, gabled roof (running north-south) frame (covered with clapboard) service wing, resting on a stone foundation, along the north wall of the main building block.

The main building block features a slightly projecting, central, first floor entrance bay, which holds a wide, central, rectangular, one light entrance door, flanked by vertical leaden paned, side lights and surmounted by a leaden paned fan light. Fluted, flat pilasters flank this entrance, rising to square blocks, upon which rest fluted pilasters, which in turn hold a cornice. Two tall, floor-to-ceiling, rectangular, double-hung windows, holding one-over-one lights, are surmounted by flat wooden lintels with cornices and decorated with wooden shutters. A one story high, hipped roof, open porch runs along the entire east elevation of the main building block, with scroll work directly over the central entrance way. It also runs along almost all of the east wall of its service wing. The porch is held by six doric columns and two pilasters and features a row of dentils, which decorate its box cornice.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Cattail Farm faces east on the west side of Route 97, set back from the road on a gentle rise of ground. It is a five bay wide, two bay deep, two and a half story high, gabled roof (running north-south) frame (covered by clapboard) house, resting on a stone foundation, with twin, wide brick chimneys inset into its north and south walls and a two bay wide, two bay deep, two story high, gabled roof (running north-south) frame (covered with clapboard) service wing, resting on a stone foundation, along the north wall of the main building block.

THE EAST FACADE

The main building block features a slightly projecting, central, first floor entrance bay, which holds a wide, central, rectangular, one light entrance door, flanked by vertical leaden paned, side lights and surmounted by a leaden paned fan light. Fluted, flat pilasters flank this entrance, rising to square blocks, upon which rest fluted pilasters, which in turn hold a cornice. Two tall, floor-to-ceiling, rectangular, double-hung windows, holding one-over-one lights, are surmounted by flat wooden lintels with cornices and decorated with wooden shutters. A one story high, hipped roof, open porch runs along the entire east elevation of the main building block, with scroll work directly over the central entrance way. It also runs along almost all of the east wall of its service wing. The porch is held by six doric columns and two pilasters

and features a row of dentils, which decorate its box cornice.

The second floor central bay of the east facade holds a tripartite window composed of a large, one-over-one light, rectangular window, flanked by tall, narrow, rectangular, one-over-one light windows, separated and flanked by pilasters, surmounted by a flat lintel with a cornice. Two second floor windows, proportionally scaled and vertically aligned to those below, rest on each side of this tripartite window.

A central intersecting gable, featuring a closed pediment, holds a small tripartite window, composed of a central, roman arched, double-hung window, holding nine gothic arched and rectangular lights-over-one light, flanked by small rectangular windows featuring a central diamond light with a triangular light in each corner. These windows are separated and flanked by pilasters, underlined by a flat sill and surmounted by a flat wooden lintel and central roman arched, wooden lintel with key stone. Along the eave line of the intersecting gable runs a row of dentils and brackets, which decorates the cornice, running along the roofline of the east and west elevations, as well, and the gable ends of the north and south elevations.

The east wall of the service wing holds an oval shaped window with keystone in its south bay and a one-over-one light window in its north bay.

THE SOUTH ELEVATION

The south wall holds two first and second floor windows, similar to those already described, on the east elevation and a tripartite, arched attic window, which holds a central arched, double-hung window, holding nine-over-one lights, flanked by smaller arched, double-hung windows, holding nine-over-one lights. These are separated and flanked by flat pilasters, underlined by a flat sill and surmounted by an arched lintel with key stone.

Four tall, rectangular, one-over-one light windows rest in the south wall of a one story high, shed roofed enclosed porch along the west elevation.

THE NORTH ELEVATION

The east bay of the north wall holds a first and second floor window, similar to those described and a roman arched, ten-over-one light window, surmounted by a roman arched lintel and key stone.

The north wall of the service wing holds a tripartite, first floor, casement window, each component a six light, rectangular casement window, and two second floor windows, similar to those already described.

THE WEST ELEVATION

Along the entire west elevation of the main building block,

and the southern half of its north service wing runs a one story high, shed roofed, sun porch, holding a rather centrally located, rectangular, fifteen light entrance door. Four wooden steps, flanked by an iron railing, lead to this entrance, flanked on the south by two tripartite windows, separated by a flat pilaster and on the north by a quatre partite window. Each component of these windows is a tall, rectangular, double-hung window, holding one-over-one lights. A squarish, one-over-one light window rests in the center of that section, which runs along the service wing. Five second floor, rectangular, double-hung windows, holding one-over-one lights, decorated with shutters, are placed in the main building block's west wall, with a similar second floor window in the north bay of the service wing, vertically aligned to a six-over-six light, first floor window below. Seven poured-in-place, concrete steps lead to a landing for the four light, rectangular entrance door, placed in the north wall of the north end of the sun porch.

A swimming pool lies south of the house, and several auxiliary buildings, most prominent of which is a large, two story high, frame barn, lie west of the house.

INTERIOR

The interior of Cattail Farm has been modified somewhat from the days when Margaret Banks Dorsey lived here but the stone foundation of the house remains the same, holding a wide central stone

wall (running north-south), bearing the division wall between the living room and parlor on the south side of the central hall and the dining room and den on its north side. Log joists, some cut in half, others whole trees, run east-west, supporting the wide random width floors of the first floor. A full basement is found on the east side of the house, with crawl space on the west side.

The major stylistic detail occurring in the window treatment of the end gables and the central, projecting bay, intersecting gable evidently occurred during the tenure of the Gaither family in the early twentieth century.

During the tenure of the Brubackers in the mid-twentieth century, the central staircase for the house, as well as its mantelpieces, were removed and the downstairs completely gutted in order for steel girders to be placed in the walls to reinforce the house. The Brubackers completely renovated the downstairs, replacing the staircase and putting back the mantelpieces, which they had found in the downstairs rooms. (These mantelpieces are of the early twentieth century period and were evidently installed by Daniel Gaither at that time). Additionally, they uncovered a fireplace in the northwest room of the house. This created a focal point for their den, which was then paneled with handhewn, square, ceiling joists exposed.

The ceilings of the hall, dining room, living room and parlor, all feature crown molding, decorated with a row of dentils. The wide

hall staircase rises directly to the second floor landing and features round tapered balusters.

The second floor of the main building block features wide, random width floors, open bible and cross paneled doors and two original mantle-pieces. That in the southwest corner bedroom features a simple flat lintel, supported by two flat pilasters, encased in a simple molding, all of which is surmounted by two short pilasters which hold a tapered mantle shelf. An original, open bible and cross paneled entrance door, west of the mantle, opens into an original closet. The door holds a box lock and china door knob. Another original mantle is found in the northeast corner bedroom. It features flat pilasters with two square flutes supporting a flat lintel encased in a simple molding.

In the northwest corner room a rectangular, open bible and cross paneled attic staircase door is found. It is framed by two flat pilasters and a flat lintel, joined by a square cornerblock. The staircase leads to the attic, which is covered by a shingled gabled roof, covered now by a slate roof. Wide 12 to 14 inch floor boards are found here, as well as square cut nails.

THE SERVICE WING

The service wing is as old as the main building block and now holds, on the first floor, a large modern kitchen with an enclosed staircase to the second floor, running along its east wall. The second

floor holds a hall (running east-west), off which two bedrooms are found. The moldings on the hall side of the doorways are twentieth century, but the door and window frames of the interior walls of the two rooms feature two pilasters with two squarely cut flutes and a similar lintel, joined at their corners by simple square blocks.

BUILDER/ARCHITECT

STATEMENT OF SIGNIFICANCE

Cattail Farm is a good example of vernacular frame architecture in Howard County with some very fine stylistic detail in the treatment of the cornice, its intersecting gable and its wide central entrance and fan light.¹ Historically, it is associated with Margaret Banks Dorsey, the daughter of Samuel Banks, who lived at HO-10, New Year's Gift and sister to Henry Banks, who lived at adjoining Waterford Farm, HO-494.²

EXPLANATORY NOTES:

Architecturally, this vernacular frame house is given a note of elegance from the fine stylistic detail, which adorns its east facade. It is composed of a major five bay wide, two bay deep, two and a half story high, frame building block to which a smaller service wing has been constructed off its north wall. The two blend successfully, tied together by a one story high, open porch, featuring a cornice decorated with a row of dentils, running along their east walls.

The doorway is especially elegant, flanked by leaden paned side lights and fluted pilasters and surmounted by a leaden paned fan-light.

Cattail Farms is obviously the house in which Margaret Banks Dorsey and her husband John A. Dorsey lived. The service wing and main building block existed at that time. Later, however, in the early nineteenth century, under the tenure of the Gaither family certain stylistic changes occurred to the exterior of the building, mainly evidenced in the addition of a central, projecting entrance bay on the east facade, surmounted by a central, intersecting gable, holding the tripartite window, previously described. The tripartite attic window on the south elevation and the single attic window on the north elevation were also added at this time, as well as the three downstairs mantelpieces. It is probable that the window sashes were changed at this time to hold large one-over-one lights, rather than the smaller six-over-six light, double-hung sashes of the mid-nineteenth century.

In the mid-twentieth century the building again undertook a general restoration and renovation, with its walls reinforced by steel girders and its central staircase installed. The early twentieth century mantelpieces were retained and new crown molding added to adorn the downstairs hall and its three rooms. The second floor, however, remained virtually untouched, although it was renovated. Its open bible and cross paneled entrance doors remain, its two original mantelpieces and its wide random width floors.

As a house which bridges the history of some hundred and twenty or thirty years, its architecture presents a study in change,

2. Historically, this property is one of the most interesting in Howard County, for it is connected with the prominent Banks family, who settled at HO-10, New Year's Gift, in the first half of the nineteenth century.

By 1856, the date of the will of Samuel Banks, he had accumulated some 900 acres of land and owned some 34 slaves. His will is of interest for in it he remembered each of his older children, bequeathing them substantial acreage. Cattail Farm began in such a way with Samuel Banks bequeathing a ninety three and a fourth acre tract of land, Lot #3 (see Attachment 5) to his daughter Margaret Banks Dorsey. Later, she and her husband acquired an additional one hundred and twenty five (125) acres from her brother Henry and his wife Arianna, who lived at Waterford Farms, for \$2,500.00.

The period of the 1850's and 1860's was a period of turbulence in Howard County, with southern sympathies running high in this area during the Civil War. Margaret's brother Henry died at its termination in 1865, leaving his wife Arianna and seven children. Margaret's family held on a little longer. In 1888, she deeded the property to her son, John A. Dorsey, who mortgaged it in the same year, finally losing it altogether in 1895 to Dennis P. Gaither. Great prosperity had reigned for this family in 1856. Their father, Samuel, had given each of his five children five slaves and a nice piece of property to each of his three oldest children. His wife remained on the "home farm," acquired from Dr. Richard Dorsey in 1840, with nine slaves. By the end of the

century, these large land holdings had passed to other hands and the outcome of the Civil War had issued in a new order for the plantation farms of Maryland and the southern states.

The present house with later stylistic changes previously described is believed to date from 1853. The conveyance of 1888 by Margaret Dorsey to her son, John A. Dorsey, states "the property where I now live" and her son, in the mortgage transaction of that same year, states, "being the Farm on which we now live." By 1895, the Farm was acquired by the Dennis P. Gaither family, who resided here until 1945, and was increased by the addition of a 153 acre tract of land. In 1945, the farm was conveyed to Marlin D. Brubaker and his wife, Audrey, for \$5,550.00, by Edith M. Gaither, widow of Daniel, the son of Dennis Gaither. Since 1954, J. Garret and Catherine B. Reilly have owned this lovely tract of land and buildings, now consisting of some 262 acres of land.
